EXPERIENCE

Software Engineer Analyst — June 2026 – Present
Accenture — *Bengaluru, India*

- Working on a large-scale fleet telemetry consumption and processing system that generates insights from heavy mining and construction machinery.
- Contributing to backend and cloud development across **Java**, **Spring Boot**, **MQTT**, AWS IoT Core, Lambda, Kinesis, DynamoDB, ECS Fargate, SQS/SNS, CloudFormation, and Snowflake.
- Building resilient telemetry flows for intermittent connectivity, retries, idempotency, duplicate and out-of-order events, data validation, and observability.

Associate Software Engineer — Sep 2024 – May 2026
Accenture — *Bengaluru, India*

- Developed and maintained **Java Spring Boot** microservices within **PRESTO FPS**, supporting **1M+ daily transactions** across 10+ transit agencies; implemented **Redis** caching and composite **SQL** indexes, reducing payment-confirmation latency by **35%**.
- Built **Kafka** consumers in **Spring Boot** for a settlement pipeline handling **2M+ events/day**; integrated **Spring Security** and **JWT** for service-to-service authentication.
- Refactored legacy payment validation with the **Strategy** pattern for agency-specific fare rules, improving maintainability.

PROJECTS

AroundU – Hyperlocal Freelancing Platform (Distributed System) — Jan 2026 – Present

- Designed a **production-grade modular monolith** in **Java 21** for job discovery, bidding, escrow payments, OTP verification, and reviews, using Strategy, Decorator, Builder, and Chain of Responsibility.
- Engineered geo-spatial search using **Redis GEO** as a secondary index and **PostgreSQL** as the source of truth, with fallback queries and retries; deployed on **AWS EC2** with **Kubernetes (k3s)**, NGINX Ingress, and HPA.
- Built resilient payments with **Resilience4j** (Circuit Breaker + Retry) and distributed locking; added observability with Actuator, Micrometer, Prometheus, Grafana, and custom `aroundu.*` metrics.

Technologies: Spring Boot, PostgreSQL, Redis, Resilience4j, JWT, Hibernate, Docker, k3s, Prometheus, Grafana

TalkingYoutube – Semantic RAG System — Oct 2025

- Built a persistent semantic RAG system for YouTube transcripts using **FastAPI**, **Google Gemini** embeddings, and **PostgreSQL + pgvector**, retaining sessions, embeddings, and chat history with grounded, timestamped citations.
- Designed per-video embedding removal with `ON DELETE CASCADE`; containerized and hardened the stack with **Docker Compose** and Docker Scout, reducing frontend criticals/highs from 1C/28H to 1C/4H.

Technologies: Python, FastAPI, Next.js, PostgreSQL, pgvector, Gemini, RAG, Docker, Docker Compose

EDUCATION

Ajay Kumar Garg Engineering College — 2020 – 2024
*Bachelor of Technology (Computer Science) – **CGPA: 7.8*** — *Ghaziabad, India*

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Database Management Systems, Computer Networks, Object-Oriented Programming, Distributed Systems, Software Engineering

TECHNICAL SKILLS

Languages: Java, Python, C++ (DSA & Competitive Programming)
Backend & Distributed Systems: Spring Boot, REST, gRPC, Kafka, MQTT, Microservices, Modular Monolith, Resilience4j, JWT, Hibernate
Databases: PostgreSQL (SQL), Redis (NoSQL), MongoDB (NoSQL), DynamoDB, Snowflake
DevOps & Cloud: Docker, Kubernetes (k3s), AWS (IoT Core, Lambda, Kinesis, ECS, SQS/SNS, EC2, RDS, VPC, CloudFormation), GitHub Actions, Jenkins, Maven, Linux/Unix
Observability: Prometheus, Grafana, Micrometer, Spring Boot Actuator
Design Patterns: Strategy, Observer, Factory, Builder, Decorator, Repository, Facade, Chain of Responsibility

ACHIEVEMENTS & CERTIFICATIONS

- Received **300+*** claps on Medium Articles
- **Google Cloud Certified Generative AI Leader** (July 2025)
- Solved **600+ DSA problems** in **C++** across LeetCode, Codeforces, GeeksforGeeks, and takeUForward
- **2nd Position** – TechSprint'23 Hackathon (250+ participants)
- Application Domain Head — **Blockchain Research Lab**, AKGEC (2022–2024)
